Professional Engineering at work for you

BJS Consultants has extensive experience in the design, administration and supervision of structural and civil engineering services in the private and public sectors. Our projects include corporate, commercial, industrial, leisure, education and health-related schemes.

By balancing construction costs with client requirements and our commitment to the environment, we deliver sophisticated, efficient structures. Working with all materials, we can undertake complex structural designs.

BJS Consultants act as PSDP on all projects we are involved in. We have also acted as PSCS on specialist projects. We have never had a loss time accident or incident in 19 years managing projects.

As problem solvers, we seek solutions that achieve our clients' aspirations. Our services cover every stage, from conceptual and feasibility planning to detailed design and construction management.

We offer specialist skills in the areas of substructure and foundations, basements, superstructures, steel and concrete frames, post-tensioned slab designs, transfer structures and dynamic analysis.

We also provide Mechanical & Electrical Design, using our partners to provide a turnkey design and management package.

BJS Consultant's engineers combine an in-depth understanding of the properties and behaviour of materials with good technical training and modern analytical tools. These include computer-aided design (CAD), structural modelling packages, building information modelling (BIM) techniques and project planning methodologies.

SERVICES

- ◆ Project Scheme Design
- ◆ Acting as PSDS under Health & Safety (construction) Regulations
- ◆ Planning Permission, Disability Access
- ◆ Fire Certificates
